SPI Perimeter protection

Rx (Receiver)  Sx (Starter Beam)

These instructions explain how to use the SPI SX & Rx units and show their various configurations.

The SPI Rx is used at the end of every zone. The SPI Rx is the device that determines the zone number that is displayed on the SPI keypad or master.

The SPI Sx is used at the start of a zone. It may be used more than once on the SPI system if there are segmented zones.
SPI Perimeter protection  Rx(receiver) & Sx (Starter Beam)

Open loop single beam

Using an FX (forwarder) unit

- Infrared beam
- SPI BUS
- Wire link
- Perimeter zone

Same zone number
